## Product Description

The DisplayMax Jr 3000 is a rugged, easy to use signal level meter capable of measuring analog and digital channels at any point in the CATV system from the headend to the subscriber drop. In addition to signal level, the Jr 3000 detects both leakage and ingress at the subscriber drop and home wiring. Finding and fixing leakage and ingress is essential to maintaining VoIP and High-Speed Data services. The first step is to test for ingress coming from the customer's premise. If ingress is detected, use the leakage mode to quickly find the source. Routine testing for leakage and ingress, in addition to verifying analog and digital channel level, will insure the most demanding services run smoothly.

## Ingress Detection

Ingress is caused by loose connections or poorly shielded coax. These conditions allow outside signals into the cable and can slow down or abruptly stop digital services. Having a meter that detects the presence of ingress is essential to maintaining digital services such as VoIP and High-Speed Data. To measure ingress, the installer disconnects the drop cable from the ground block, connects the meter to the home cabling, then presses the Ingress Check key. If ingress is present, the meter's LCD will show the frequency with the highest ingress level along with a pass/fail message. Once detected, use the leakage mode to find the source.

## Leakage Detection

Leakage is caused by loose connections or poorly shielded coax. These conditions allow forward channels to escape from the cable. They also allow outside signals to enter the return path (ingress). Therefore, finding and fixing leakage also fixes ingress. To measure leakage, the installer attaches a rubber duck antenna to the meter's input, then press the leakage key. Special signal processing eliminates false leakage readings caused by electrical noise, aircraft communications or other non-cable signals. The meter displays the leakage reading numerically and also emits a variable tone that increases in pitch as the leakage reading increases. Testing for leakage is a crucial part of maintaining VoIP and High-Speed Data services.

## Field Rugged and Accurate

The DisplayMax Jr 3000 has a rugged aluminum housing, weather proof keypad, protected LCD display, virtually unbreakable F-connector bushing and comes in a padded nylon case. In addition to the rugged mechanical design, the meter has a built-in white noise source that acts as a calibration reference. Before each reading, the meter adjusts its calibration, making the DisplayMax Jr 3000 not only rugged, but also extremely accurate. The auto-calibration feature maintains the meter's accuracy and eliminates the need for annual calibration.
