## **Distributed Architecture For The Object Oriented Method For Interoperability:**

*Distributed Architecture for the Object-Oriented Method for Interoperability* George M. Lawler, 2003-03-01 The Department of Defense DoD is both challenged by the quest for interoperability and capable of the bottom up development of a solution The predominant method for achieving interoperability is the development of an intermediate representation that provides a common integration language or data model An example is Young s Object Oriented Method for Interoperability OOMI which produces a Federation Interoperability Object Model FIOM for the resolution of heterogeneities in representation and view of a real world entity An FIOM generates a standard for interoperability by associating the nonstandard component system data models into an extensible lattice which captures translations that resolve data modeling differences
