

6. Locate the gills by moving the top layer of the mantle out of the way. You should also be able to see the labial palp. The mouth is located just under the labial palp, but you will likely not be able to see it. See Figure 3.

6. Remove the gills and labial palps that are exposed. Underneath the gills, you will see the foot. The foot is a muscular structure that helps the clam move and dig. Attached to the foot, you will see the visceral mass. The visceral mass houses all of the internal organs. See Figure 4.

7. Carefully use your scalpel to scrape and pull the top layer of the visceral mass open to reveal the internal organs. Once the organs are exposed, it should look like Figure 5. You will be able to see a yellowish mass called the gonads. These are the reproductive organs of the clam. Near the anterior end of the visceral mass, you will see a greenish-colored digestive gland that helps the clam digest its food.
