Distributed Network Systems Weijia Jia,Wanlei Zhou,2004-12-15 Both authors have taught the course of Distributed Systems for many years in the respective schools During the teaching we feel strongly that Distributed systems have evolved from traditional LAN based distributed systems towards Internet based systems Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology Specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming Thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming After using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design prototyping and implementations This book intends to enable readers especially postgraduates and senior undergraduate level to study up to date concepts algorithms and network programming skills for building modern distributed systems It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices *Distributed Network Systems* Weijia Jia,Wanlei Zhou,2008-11-01 Both authors have taught the course of Distributed Systems for many years in the respective schools During the teaching we feel strongly that Distributed systems have evolved from traditional LAN based distributed systems towards Internet based systems Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology Specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming Thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming After using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design prototyping and implementations This book intends to enable readers especially postgraduates and senior undergraduate level to study up to date concepts algorithms and network programming skills for building modern distributed systems It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices *Implementing Parallel and Distributed Systems* Alireza Poshtkohi,M. B. Ghaznavi-Ghouschi,2023-04-13 Parallel and distributed systems PADS have evolved from the early days of computational

science and supercomputers to a wide range of novel computing paradigms each of which is exploited to tackle specific problems or application needs including distributed systems parallel computing and cluster computing generally called high performance computing HPC Grid Cloud and Fog computing patterns are the most important of these PADS paradigms which share common concepts in practice Many core architectures multi core cluster based supercomputers and Cloud Computing paradigms in this era of exascale computers have tremendously influenced the way computing is applied in science and academia e g scientific computing and large scale simulations Implementing Parallel and Distributed Systems presents a PADS infrastructure known as Parvicursor that can facilitate the construction of such scalable and high performance parallel distributed systems as HPC Grid and Cloud Computing This book covers parallel programming models techniques tools development frameworks and advanced concepts of parallel computer systems used in the construction of distributed and HPC systems It specifies a roadmap for developing high performance client server applications for distributed environments and supplies step by step procedures for constructing a native and object oriented C platform FEATURES Hardware and software perspectives on parallelism Parallel programming many core processors computer networks and storage systems Parvicursor NET Framework a partial native and cross platform C implementation of the NET Framework xThread a distributed thread programming model by combining thread level parallelism and distributed memory programming models xDFS a native cross platform framework for efficient file transfer Parallel programming for HPC systems and supercomputers using message passing interface MPI Focusing on data transmission speed that exploits the computing power of multicore processors and cutting edge system on chip SoC architectures it explains how to implement an energy efficient infrastructure and examines distributing threads amongst Cloud nodes Taking a solid approach to design and implementation this book is a complete reference for designing implementing and deploying these very complicated systems
