

Check pressure plate spring length against data shown on page 2, Section 20.

Check clutch brake linings for wear (see page 2, Section 20).

Check that lock ring retainer (14, page 3) moves freely on the associated dowels.

Then adjust clutch as directed below.

CLUTCH ADJUSTMENT

When clutch adjustment is correct, engagement will require a force of 157 to 168 N (16 to 17 kg or 353 to 378 lb) applied to the hand lever grip (see figure 5) and a distinct click will be felt upon engagement.

NOTE — Clutch must be adjusted with the engine off.

As the clutch plates wear down, the actuation force will diminish and the click will become less pronounced. Adjust as follows:

- Remove cover from left hand side of housing and bring aperture (H, see page 3 and figure 9) into view.
- Insert wrench 290954 (B) supplied with tractor through aperture (H). Push wrench towards fly-wheel to free lock ring (28) from retainer (14).

NOTE — Do not release hold on wrench (B), as spring (13) behind retainer (14) could push wrench out and cause it to fall down into the housing. As a precautionary measure, a cord should be tied to the end of the wrench.

- Turn wrench clockwise to increase or counter-clockwise to reduce lever actuating force.
- Remove wrench and check that spring (13)

Checking clutch engagement force (engine off).
L. Clutch lever - M. Spring scale.

returns retainer (14) to correct position on lock ring.

Reference screw (29) prevents the wrench from being removed if retainer position is not correct. Should the retainer fail to engage the lock ring automatically, push it in by hand and release it immediately thereafter.

Adjusting clutch engagement.
