Transfer Dynamics in Molecular Systems Volkhard May, Oliver Kühn, 2011-04-27 This 3rd edition has been expanded and updated to account for recent developments while new illustrative examples as well as an enlarged reference list have also been added It naturally retains the successful concept of its predecessors in presenting a unified perspective on molecular charge and energy transfer processes thus bridging the regimes of coherent and dissipative dynamics and establishing a connection between classic rate theories and modern treatments of ultrafast phenomena Among the new topics are Time dependent density functional theory Heterogeneous electron transfer e g between molecules and metal or semiconductor surfaces Current flows through a single molecule While serving as an introduction for graduate students and researchers this is equally must have reading for theoreticians and experimentalists as well as an aid to interpreting experimental data and accessing the original literature

Progress in Ultrafast Intense Laser Science VI Kaoru Yamanouchi, Gustav Gerber, Andre D Bandrauk, 2010-11-25 The PUILS series delivers reviews of progress in Ultrafast Intense Laser Science an emerging field This sixth volume covers a broad range of topics from this interdisciplinary research field to provide a state of the art report of short time Laser physics

Femtochemistry and Femtobiology Monique M. Martin, James T. Hynes, 2004-04-16 This book reflects the heights of knowledge of ultrafast chemical processes attained in these early years of the 21st century the latest research in femtosecond and picosecond molecular processes in Chemistry and Biology carried out around the world is described here in more than 110 articles The results were presented and discussed at the VIth International Conference on Femtochemistry in Paris France from July 6 to July 10 2003 The articles published here were reviewed by referees selected from specialists in the Femtochemistry community guaranteeing a collective responsibility for the quality of the research reported in the next 564 pages Femtochemistry is an ever growing field where new research areas are constantly opening up and one which both stimulates and accompanies the development of ultrafast technologies The increasing interest in femtobiology and chemistry at the frontier with biology is an obvious indicator of the present impact of life sciences in our society New materials and reactions at surfaces are also some of the relatively new topics that promise rapid developments New methodologies and technologies for probing and following in real time molecular dynamical phenomena have appeared within the last ten years or so These methods based on multidimensional IR spectroscopies ultrafast X ray and electron diffraction techniques are well represented in this book Of ever improving performance they are now applied to the characterization of structural dynamics of an increasing number of chemical and biological systems This book reports the state of research in Femtochemistry and Femtobiology presented at Paris at the Maison de la Chimie in July 2003 representing the tenth anniversary of the conference Overview of the most recent research on ultrafast events Application of new methodologies on chemical and biological systems Contributions by key players in the field

Femtochemistry And Femtobiology: Ultrafast Dynamics In Molecular Science Abderrazzak Douhal, Jesus Santamaria, 2002-05-30 This book contains important contributions from top

international scientists on the state of the art of femtochemistry and femtobiology at the beginning of the new millennium It consists of reviews and papers on ultrafast dynamics in molecular science The coverage of topics highlights several important features of molecular science from the viewpoint of structure space domain and dynamics time domain First of all the book presents the latest developments such as experimental techniques for understanding ultrafast processes in gas condensed and complex systems including biological molecules surfaces and nanostructures At the same time it stresses the different ways to control the rates and pathways of reactive events in chemistry and biology Particular emphasis is given to biological processes as an area where femtodynamics is becoming very useful for resolving the structural dynamics from techniques such as electron diffraction and X ray and IR spectroscopy Finally the latest developments in quantum control in both theory and experiment and the experimental pulse shaping techniques are described *Femtochemistry* Majed Chergui, 1996-01-01

Femtochemistry Ahmed H. Zewail, 1994 These two volumes on Femtochemistry present a timely contribution to a field central to the understanding of the dynamics of the chemical bond This century has witnessed great strides in time and space resolutions down to the atomic scale providing chemists biologists and physicists with unprecedented opportunities for seeing microscopic structures and dynamics Femtochemistry is concerned with the time resolution of the most elementary motions of atoms during chemical change bond breaking and bond making on the femtosecond 10⁻¹⁵ second time scale This atomic scale of time resolution has now reached the ultimate for the chemical bond and as Lord George Porter puts it chemists are near the end of the race against time These two volumes cover the general concepts techniques and applications of femtochemistry Professor Ahmed Zewail who has made the pioneering contributions in this field has from over 250 publications selected the articles for this anthology These volumes begin with a commentary and a historical chronology of the milestones He then presents a broad perspective of the current state of knowledge in femtochemistry by researchers around the world and discusses possible new directions In the words of a colleague it is a must on the reading list for all of my students all readers will find this to be an informative and valuable overview The introductory articles in Volume I provide reviews for both the non experts as well as for experts in the field This is followed by papers on the basic concepts For applications elementary reactions are studied first and then complex reactions Volume I is complete with studies of solvation dynamics non reactive systems ultrafast electron diffraction and the control of chemical reactions Volume II continues with reaction rates the concept of elementary intramolecular vibrational energy redistribution IVR and the phenomena of rotational coherence which has become a powerful tool for the determination of molecular structure via time resolution The second volume ends with an extensive list of references according to topics based on work by Professor Zewail and his group at Caltech These collected works by Professor Zewail will certainly be indispensable to both experts and beginners in the field The author is known for his clarity and for his creative and systematic contributions These volumes will be of interest and should prove useful to chemists biologists and
