Blockchain Fundamentals for Web 3.0 Mary C. Lacity, Steven C. Lupien, 2022-10-07 Our book explains the movement to establish online trust through the decentralization of value, identity and data ownership. This movement is part of Web 3.0, the idea that individuals rather than institutions will control and benefit from online social and economic activities. Blockchain technologies are the digital infrastructure for Web 3.0. While there are many books on blockchains, crypto and digital assets, we focus on blockchain applications for Web 3.0. Our target audience is students, professionals and managers who want to learn about the overall Web 3.0 landscape, the investments, the size of markets, major players and the global reach, as well as the economic and social value of applications. We present applications that use Web 3.0 technologies to unlock value in DeFi, NFTs, supply chains, media, identity, credentials, metaverses and more. Readers will learn about the underlying technologies, the maturity of Web 3.0 today and the future of the space from thought leaders. This textbook is used by undergraduate and graduate Blockchain Fundamentals courses at the University of Arkansas, the University of Wyoming and other universities around the world.
