Product description

Invitrogen™ Gateway™ LR Clonase™ II enzyme mix is a proprietary enzyme and buffer formulation containing the bacteriophage lambda recombination proteins Integrase (Int) and Excisionase (Xis), the *E. coli*-encoded protein Integration Host Factor (IHF), and reaction buffer provided in a single mix for convenient reaction set up. Gateway™ LR Clonase™ II enzyme mix catalyzes in vitro recombination between an entry clone (*attL*-flanked “gene”) and an *attR*-containing destination vector to generate an *attB*-containing expression clone. Store Gateway™ LR Clonase™ II enzyme mix at –20°C (non-frost-free freezer) for up to 6 months. For long-term storage, store at –80°C.

Gateway™ technology

Gateway™ Technology is a universal cloning method that takes advantage of the site-specific recombination properties of bacteriophage lambda to provide a rapid and highly efficient way to move DNA sequences into multiple vector systems. The Gateway™ Technology is schematically represented below.

$$attB1\text{-gene-}attB2 \times attP1\text{-}ccdB\text{-}attP2 \rightleftharpoons attL1\text{-gene-}attL2 \times attR1\text{-}ccdB\text{-}attR2$$

(expression clone) (pDONR™) (entry clone) (destination vector)

The *attB* × *attP* reaction is mediated by Gateway™ BP Clonase™ II enzyme mix; the *attL* × *attR* reaction is mediated by Gateway™ LR Clonase™ II enzyme mix. *ccdB* is the F plasmid-encoded gene that inhibits growth of *E. coli* and “gene” represents any DNA segment of interest (e.g. PCR product, cDNA, genomic DNA).

ROS Regulation during Plant Abiotic Stress Responses Zhulong Chan, Chun-Peng Song, Woe Yeon Kim, Ken Yokawa, 2017-02-08 Plants are continuously exposed to a wide range of environmental conditions including cold drought salt heat which have major impact on plant growth and development To survive plants have evolved complex physiological and biochemical adaptations to cope with a variety of adverse environmental stresses Among them reactive oxygen species ROS are key regulators and play pivotal roles during plant stress responses which are thought to function as early signals during plant abiotic stress responses ROS were long regarded as unwanted and toxic by products of physiological metabolism However ROS are now recognized as central players in the complex signaling network of cells Therefore a fine tuning control between ROS production and scavenging pathways is essential to maintain non toxic levels in planta under stressful

conditions through enzymatic and non enzymatic antioxidant defense systems We focus on the roles of ROS during plant abiotic stress responses in this Research Topic Plant responses to multiple abiotic stresses and effects of hormones and chemicals on plant stress responses have been carefully studies Although functions of several stress responsive genes have been characterized and possible interactions between hormones and ROS are discussed future researches are needed to functionally characterize ROS regulatory and signaling transduction pathways Structure and Plasticity of Protein-protein Interfaces in Factor Xa and the Androgen Receptor Eugene Hur,2006 To better understand these issues in the context of the proteolytic blood coagulation cascade the structure of factor Xa FXa was solved in complex with a M84R variant of the macromolecular protease inhibitor ecotin The structure reveals the atomic mechanism of association Despite not possessing the recognition sequence of canonical FXa substrates ecotin binds FXa with pico molar affinity through a combination of induced fit and nonspecific secondary site interactions *Characterization of Rice Genes Regulating Xa21-mediated Disease Resistance* Ying Peng,2008 *Gene Transfer* Theodore Friedmann,John J. Rossi,2007 Understanding gene function and regulation requires rigorous testing in live cells and organisms Recent advances have provided a variety of new strategies for delivering DNA and RNA into cells and probing their expression as well as new clinical applications that rely upon the introduction of genetic material The vast number of available techniques for clinical and laboratory research often makes selecting the optimal method a difficult process Gene Transfer Delivery and Expression of DNA and RNA provides the first comprehensive guide to technical approaches for delivering nucleic acids into cells and organisms and of ensuring even manipulating appropriate expression The detailed step by step protocols cover a variety of methods both well established and newly evolving These include viral and nonviral methods of gene delivery transgenic approaches strategies for the regulation of transgene expression and modification of the host response The introductory matter to each chapter includes concise technical and theoretical discussions with considerations for selection of the appropriate system and strategies for delivery
