Harris, 2008 *Planning and Designing Healthcare Facilities* Vijai Kumar Singh, Paul Lillrank, 2017-10-30 The planning and design of healthcare facilities has evolved over the previous decades from function follows design to design follows function Facilities stressed the functions of healthcare providers but patient experience was not fully considered The design process has now crucially evolved and currently the impression a hospital conveys to its patients and community is the primary concern The facilities must be welcoming comfortable and exude a commitment to patient well being Rapid changes and burgeoning technologies are now major considerations in facility design Without flexibility hospitals face quicker obsolescence if designs are not forward thinking *Planning and Designing Healthcare Facilities A Lean Innovative and Evidence Based Approach* explores recent developments in hospital design Medical facilities have been adapted to the requirements of clinical functions Recently the needs of patients and clinical pathways have been recognized With the patient at the center of the process the flow of tasks becomes the guiding principle as hospital design must employ evidence based thinking and process management methods such as Lean become central The authors explain new concepts to reduce healthcare delivery cost but keep quality the primary consideration Concepts such as sustainability i.e Green Hospitals and the use of new tools and technologies such as information and communication technology ICT Lean and evidence based planning and innovations are fully explained **A Visual Reference for Evidence-based Design** Jain

Malkin,2008      What is the Evidence? Kelly N. Hogg,2013 How do architects make decisions What is the evidence for what they do With the emerging practice of evidence based design many studies have been putting forth claims with opinions about what the best or right way to design is But how credible are these research findings And how has evidence based design influenced the way that designers make critical decisions This research based thesis evaluates the method of evidence based design and seeks to understand how architectural designers evaluate evidence related to design issues in healthcare environments Interviews with local designers healthcare owners and developers reveal insight into how practitioners interact with evidence based design findings how the data is evaluated and how the process of evidence based design is actually utilized in professional practice      Design That Cares Janet R. Carpman,Myron A. Grant,2016-06-20 Design That Cares Planning Health Facilities for Patients and Visitors 3rd Edition is the award winning essential textbook and guide for understanding and achieving customer focused evidence based health care design excellence This updated third edition includes new information about how all aspects of health facility design site planning architecture interiors product design graphic design and others can meet the needs and reflect the preferences of customers patients family and visitors as well as staff The book takes readers on a journey through a typical health facility and discusses in detail at each stop along the way how design can demonstrate care both for and about patients and visitors Design that Cares provides the definitive roadmap to improving customer experience by design      *Evidence-based Design for Healthcare Facilities* Cynthia S. McCullough,2010      *Compassion in Architecture* Stephen Verderber,2005 Detailed analysis of what components are necessary and vital to a community s public health facility      The Use of Evidence-based Design in Hospital Renovation Projects David S. Whitaker,2018 Since the 1960s researchers have been exploring how the design of the built environment impacts the health and well being of occupants and users By the 1980s further research began to focus on healthcare facilities in particular and how design could influence patient healing and medical staff performance Alfonsi 2014 Evidence Based Design EBD is the process of basing decisions about the built environment on credible research to achieve the best possible outcomes CHD 2016 The desired outcomes of Evidence Based Design recommendations include improvements in the following patient healing patient experience and comfort medical staff performance and medical staff job satisfaction CHD 2017 Extensive research has been done on the subject of EBD however the question remains whether or not the latest research findings are being utilized by the design and construction industries in practice The purpose of this research is to determine whether or not the latest scientific knowledge and research findings are being implemented into hospital renovation projects by the healthcare design and construction industries A list of recommendations from existing EBD literature was compiled Construction documents from 30 recent healthcare facility renovation projects across the United States were then obtained and analyzed The findings indicate that EBD recommendations are being adopted in practice at consistently high levels These findings also reveal that there are still areas of potential improvement which could inform

those who influence or determine building and design codes standards and guidelines The results are instructive to owners designers and contractors by providing a glimpse into how well the industry is recognizing and implementing known best practices The findings likewise open up new opportunities for further research which could lead to additional improvement in the healthcare facilities of the future

From the parking lot to the exam room doctors can improve the physical surroundings for their patients yet often they do not Given the numerous and

varied duties doctors must perform it may fall to the design profession to implement changes many based on research to improve healthcare experiences From location and layout to furnishings and positive distractions this book provides evidence based information about the physical environment to help doctors and those who design medical workspaces improve the experience of health care Along with its research base a special aspect of this book is the integration of relevant historical material about the office practice of physicians at the beginning of the twentieth century Many of their design solutions are viable today In addition to improving the physical design of healthcare facilities author Ann Sloan Devlin is the granddaughter daughter and niece of physicians as well as the granddaughter and daughter of nurses She worked in a hospital during college and has visited a good many practitioners offices in medical office buildings and ambulatory care settings This book addresses an overlooked location of care the doctor s office suite

**Encouraging Healing in Hospitals** Samantha Surath,2013 This thesis is an exercise in evidence based design for a long term acute care facility proposed in Chicago IL USA The design concentrates around the patient room floor exploring industry changes with regard to single patient room configurations incorporating natural greenery and light At the crossroads of an industry crisis and a culture revolution healthcare facilities today are largely antiquated technologically inadequate and altogether unable to support the required medical and healing activities Regardless of politics aging demographics and increasing health insurance subscribers will double the demand on the healthcare industry in the coming years As focus shifts towards patient centric care concentrating on safety and quality of experience the notion of the hospital s built environment shifts from specialized care towards a more holistic approach We must now treat patients not simply disease

**Sustainability and Evidence-Based Design in the Healthcare Estate** Michael Phiri,Bing Chen,2013-11-18 This work aims to deepen our understanding of the role played by technical guidelines and tools for the design construction and operation of healthcare facilities ultimately establishing the impact of the physical environment on staff and patient outcomes Using case studies largely drawn from the UK Europe China and Australasia design approaches such as sustainability e g targets for energy efficiency carbon neutrality reduction of waste evidence based design EBD and Post Project Evaluation PPE are examined in order to identify policies mechanisms and strategies that can promote an integrated learning environment that in turn supports innovation in healthcare

*Environment-Behavior Studies for Healthcare Design* Suining Ding,2022-11-30 *Environment Behavior Studies for Healthcare Design* explains how environment behavior EB studies can contribute to healthcare design research and explores how evidence based theories can be applied and integrated into the healthcare design practice Drawing on EB theories and the latest research in environment behavior studies this book shows how the healthcare environment can positively impact patients and caregivers well being and healthcare organization s efficiency by modifying environmental attributes such as space configuration color lighting signage acoustics and artwork It addresses a range of healthcare facilities including children s hospitals long term care acute care and outpatient care facilities and uses a

range of evidence based design research methods such as interviews focus groups observations surveys and space syntax The author also explains how research evidence and evidence based design can be integrated into healthcare design more cohesively in a redefined design process This book provides a solid conceptual structure that informs a clear map for understanding the EB theories and their applications in healthcare design This research guide for healthcare design helps students academics designers and architects reconsider how to create environments that support patients healing and well being whilst considering efficiency and safety

**Evidence and Design** R. Codinhoto, 2013 In construction many problems exist that lead to poor quality of the built environment for example lack of integration between service and facility design and poor requirements management Aiming to mitigate these problems academics and practitioners have engaged in debating ways of improving the process of designing new facilities One of the approaches that has been investigated is the use of scientific evidence to support decision makers within the design process This process is called evidence based design EBD In this respect a range of studies developed in healthcare sectors encourages the application of EBD in order to add value to the design of these environments and to produce better building outcomes for patients and staff In this respect this study was designed to address this issue and is aimed at better understanding how evidence supports design The achievement of the aim was based on a revisiting the philosophical debate about the definitions of evidence and knowledge formation to propose a conceptual framework that can be used to classify evidence within the design domain b investigating the proposed use of evidence within prescriptive design methods of design c understanding how evidence has been used in design practice specifically in the design of healthcare facilities and to propose a taxonomy for different categories of evidence that support building design and their advantages and disadvantages and d exploring the existence of opportunities to improve design practice with a basis on a better understanding of evidence The focus of the research was the design process of healthcare facilities and the unit of analysis was the role of evidence within design The findings of this research enhance our understanding of design as a knowledge formation system In this respect the use of this approach opens opportunities for future studies related to the interpretation and the development of tools that assist design This research also provides insights related to analysis and synthesis as the proto theory of design as well as distributed intelligence in design
