The Global Phenomenon of Human Fossil Footprints in Rock Aaron Judkins, 2010-02-21 One of the most exciting anthropological evidences found around the world today is the phenomenon of human fossil footprints in rock The human foot shows some of the most important characteristics of human anatomy It is most useful to understand why evolution makes the claims it does and then compare it to the evidence The dating techniques geologic column and the history of mankind which evolution has taught are in complete disarray with the empirical evidence It is imperative that one understands the fallacies of the geologic column and the dating technique used to date rocks and fossils and the supposed progression from ape to man Since mainstream science only appreciates the evolutionary concept the first part of this book is dedicated to dispelling this theory This entails a detailed analysis of the theory of evolution Darwinism and the general impact this has had on academia The second half of this book examines the global phenomenon of human fossil footprints in rock
