Evolution And Human Origins An Introduction To Physical Anthropology:

Evolution and Human Origins Bobby Joe Williams, 1979 Explains the various methods of measuring quantity and distance and describes the development of these standards from prehistoric times to the present day *Human Origins* Thomas W. McKern, Sharon S. McKern, 1969 Evolution Fossils Paleontology Fossil man Heredity Human variation Race *The Human Species: An Introduction to Biological Anthropology* John Relethford, 2009-08-28 This text introduces physical anthropology the science of human biological evolution and variation Divided into four parts it addresses the major questions that concern biological anthropologists What are humans Where are our origins How did we evolve and are we still evolving and What does the future hold for the human species with an emphasis on hypothesis testing and the relationship between biology and culture

The Concept of Race in Natural and Social Science E. Nathaniel Gates, 2014-05-01 Explores the concept of race The term race which originally denoted genealogical or class identity has in the comparatively brief span of 300 years taken on an entirely new meaning In the wake of the Enlightenment it came to be applied to social groups This ideological transformation coupled with a dogmatic insistence that the groups so designated were natural and not socially created gave birth to the modern notion of races as genetically distinct entities The results of this view were the encoding of race and racial hierarchies in law literature and culture How racial categories facilitate social control The articles in the series demonstrate that the classification of humans according to selected physical characteristics was an arbitrary decision that was not based on valid scientific method They also examine the impact of colonialism on the propagation of the concept and note that racial categorization is a powerful social force that is often used to promote the interests of dominant social groups Finally the collection surveys how laws based on race have been enacted around the world to deny power to minority groups A multidisciplinary resource This collection of outstanding articles brings multiple perspectives to bear on race theory and draws on a wider range of periodicals than even the largest library usually holds Even if all the articles were available on campus chances are that a student would have to track them down in several libraries and microfilm collections Providing of course that no journals were reserved for graduate students out for binding or simply missing This convenient set saves students substantial time and effort by making available all the key articles in one reliable source Authoritative commentary The series editor has put together a balanced selection of the most significant works accompanied by expert commentary A general introduction gives important background information and outlines fundamental issues current scholarship and scholarly controversies Introductions to individual volumes put the articles in context and draw attention to germinal ideas and major shifts in the field After reading the material even a beginning student will have an excellent grasp of the basics of the subject

Introduction to Physical Anthropology Robert Jurmain, 2009-04-01 **Studying Human Origins** Raymond Corbey, Wil Roebroeks, 2001 This history of human origin studies covers a wide range of disciplines This important new study analyses a number of key episodes from palaeolithic archaeology palaeoanthropology primatology and

evolutionary theory in terms of various ideas on how one should go about such reconstructions and what if any the uses of such historiographical exercises can be for current research in these disciplines Their carefully argued point is that studying the history of palaeoanthropological thinking about the past can enhance the quality of current research on human origins The main issues in the present volume are the uses of disciplinary history in terms of present day research concerns the relative weight of cultural and other external contexts and continuity and change in theoretical perspectives The book's overall approach is an epistemological one It does not in other words primarily address anthropological data as such but our ways of handling such data in terms of our most fundamental but usually quite implicit theoretical presuppositions
