The Emotional Mind Stephen T. Asma, Rami Gabriel, 2019-04-15 Tracing the leading role of emotions in the evolution of the mind a philosopher and a psychologist pair up to reveal how thought and culture owe less to our faculty for reason than to our capacity to feel Many accounts of the human mind concentrate on the brain's computational power Yet in evolutionary terms rational cognition emerged only the day before yesterday For nearly 200 million years before humans developed a capacity to reason the emotional centers of the brain were hard at work If we want to properly understand the evolution of the mind we must explore this more primal capability that we share with other animals the power to feel Emotions saturate every thought and perception with the weight of feelings The Emotional Mind reveals that many of the distinctive behaviors and social structures of our species are best discerned through the lens of emotions Even the roots of so much that makes us uniquely human art mythology religion can be traced to feelings of caring longing fear loneliness awe rage lust playfulness and more From prehistoric cave art to the songs of Hank Williams Stephen T Asma and Rami Gabriel explore how the evolution of the emotional mind stimulated our species cultural expression in all its rich variety Bringing together insights and data from philosophy biology anthropology neuroscience and psychology The Emotional Mind offers a new paradigm for understanding what it is that makes us so unique

The Adaptive Markets Hypothesis Andrew W. Lo, Ruixun Zhang, 2024-01-31 The Adaptive Markets Hypothesis AMH presents a formal and systematic exposition of a new narrative about financial markets that reconciles rational investor behaviour with periods of temporary financial insanity In this narrative intelligent but fallible investors learn from and adapt to randomly shifting environments Financial markets may not always be efficient but they are highly competitive innovative and adaptive varying in their degree of efficiency as investor populations and the financial landscape change over time Andrew Lo and Ruixun Zhang develop the mathematical foundations of the AMH a simple yet surprisingly powerful set of evolutionary models of behaviour and then apply these foundations to show how the most fundamental economic behaviours that we take for granted can arise solely through natural selection Drawing on recent

advances in cognitive neuroscience and artificial intelligence the book also explores how our brain affects economic and financial decision making The AMH can be applied in many contexts ranging from designing trading strategies to managing risk and understanding financial crises to formulating macroprudential policies to promote financial stability This volume is a must read for anyone who has ever been puzzled and concerned by the behaviour of financial markets and the implications for their personal wealth and seeks to learn how best to respond to such behaviour

*The Routledge Handbook of Philosophy of the Social Mind* Julian Kiverstein, 2016-11-18 The idea that humans are by nature social and political animals can be traced back to Aristotle More recently it has also generated great interest and controversy in related disciplines such as anthropology biology psychology neuroscience and even economics What is it about humans that enabled them to construct a social reality of unrivalled complexity Is there something distinctive about the human mind that explains how social lives are organised around conventions norms and institutions The Routledge Handbook of Philosophy of the Social Mind is an outstanding reference source to the key topics and debates in this exciting subject and is the first collection of its kind An international team of contributors present perspectives from diverse areas of research in philosophy drawing on comparative and developmental psychology evolutionary anthropology cognitive neuroscience and behavioural economics The thirty two original chapters are divided into five parts The evolution of the social mind including the social intelligence hypothesis co evolution of culture and cognition ethnic cognition and cooperation Developmental and comparative perspectives including primate and infant understanding of mind shared intentionality and moral cognition Mechanisms of the moral mind including norm compliance social emotion and implicit attitudes Naturalistic approaches to shared and collective intentionality including joint action team reasoning and group thinking and social kinds Social forms of selfhood and mindedness including moral identity empathy and shared emotion normativity and intentionality Essential reading for students and researchers in philosophy of mind and psychology The Routledge Handbook of Philosophy of the Social Mind is also suitable for those in related disciplines such as social psychology cognitive neuroscience economics and sociology

*Aggression in Humans and Other Primates* Hans-Henning Kortüm, Jürgen Heinze, 2012-12-19 In this work aggression and conflict in man and other primates are interpreted in the light of evolutionary biology and game theory models Until now interdisciplinary collaboration between the humanities and the natural sciences has been rare and hampered by different methodologies and terminology Nevertheless such cooperation is essential for elucidating the causes and consequences of aggression in humans and in explaining what shape aggression takes in particular situations The aim of this volume is to present empirical and theoretical studies from biologists and social scientists to create an interdisciplinary framework for understanding aggression
