Evolution and Contextual Behavioral Science David Sloan Wilson, Steven C. Hayes, 2018-09-01 What do evolutionary science and contextual behavioral science have in common Edited by David Sloan Wilson and Steven C Hayes this groundbreaking book offers a glimpse into the histories of these two schools of thought and provides a sound rationale for their reintegration Evolutionary science ES provides a unifying theoretical framework for the biological sciences and is increasingly being applied to the human related sciences Meanwhile contextual behavioral science CBS seeks to understand the history and function of human behavior in the context of everyday life where behaviors occur and to influence behavior in a practical sense This volume seeks to integrate these two bodies of knowledge that have developed largely independently In *Evolution and Contextual Behavioral Science* two renowned experts in their fields argue why ES and CBS are intrinsically linked as well as why their reintegration or reunification is essential The main purpose of this book is to continue to move CBS under the umbrella of ES and to help evolutionary scientists understand how working alongside contextual behavioral scientists can foster both the development of ES principles and their application to practical situations Rather than the sequential relationship that is typically imagined between these two schools of thought this volume envisions a parallel relationship between ES and CBS where science can best influence positive change in the real world

evolution to gain new insights into human behavior Sense and Nonsense Kevin N. Laland, Gillian R. Brown, 2011-04-07
This book asks whether evolution can help us to understand human behaviour and explores diverse evolutionary methods and arguments It provides a short readable introduction to the science behind the works of Dawkins Dennett Wilson and Pinker It is widely used in undergraduate courses around the world **Evolution in the Here and Now** Nigel Barber, 2020-05-12
This book argues that the two most influential theories on modern human behavior cultural determinism and evolutionary psychology are quite inadequate Cultural deterministic theories deny personal experience and too often fall prey to anthropocentric bias Most evolutionary psychologists argue that humans are shaped to fit our ancestral past effectively freezing us in time Evolution in the Here and Now looks to new factors like social learning and adaptation to explain the idiosyncrasies of human behavior in a more complete and nuanced way Evolutionary psychologist Nigel Barber shows that human behavior is uniquely crafted by the surrounding environment in underappreciated and surprising ways For example commerce and agriculture can be interpreted as adaptive alternatives to hunting and gathering Irrigated farming was a response to land scarcity which ultimately permitted the rise of early cities This cross disciplinary approach unites the missing ingredients that have for so long impeded our understanding of our own species and its variation across cultures Evolution in the Here and Now is a bold step forward in the evolutionary understanding of human behavior that marries our biology with our history in ways that have never been attempted before **Human Evolutionary Psychology** Louise Barrett, Robin Dunbar, John Lycett, 2002-02-17
Why do people resort to plastic surgery to look young Why are stepchildren at greatest risk of fatal abuse Why do we prefer gossip to algebra Why must Dogon wives live alone in a dark hut for five days a month Why are young children good at learning language but not sharing Over the past decade psychologists and behavioral ecologists have been finding answers to such seemingly unrelated questions by applying an evolutionary perspective to the study of human behavior and psychology Human Evolutionary Psychology is a comprehensive balanced and readable introduction to this burgeoning field It combines a sophisticated understanding of the basics of evolutionary theory with a solid grasp of empirical case studies Covering not only such traditional subjects as kin selection and mate choice this text also examines more complex understandings of marriage practices and inheritance rules and the way in which individual action influences the structure of societies and aspects of cultural evolution It critically assesses the value of evolutionary explanations to humans in both modern Western society and traditional preindustrial societies And it fairly presents debates within the field identifying areas of compatibility among sometimes competing approaches Combining a broad scope with the more in depth knowledge and sophisticated understanding needed to approach the primary literature this text is the ideal introduction to the exciting and rapidly expanding study of human evolutionary psychology **Evolution and Human Behavior** John Cartwright, 2000
The book covers fundamental issues such as the origins and function of sexual reproduction mating behavior human mate choice patterns of violence in families altruistic behavior the evolution of brain size and the

Barkow, 2020-03-19 The transformative wave of Darwinian insight continues to expand throughout the human sciences While still centered on evolution focused fields such as evolutionary psychology ethology and human behavioral ecology this insight has also influenced cognitive science neuroscience feminist discourse sociocultural anthropology media studies and clinical psychology This handbook's goal is to amplify the wave by bringing together world leading experts to provide a comprehensive and up to date overview of evolution oriented and influenced fields While evolutionary psychology remains at the core of the collection it also covers the history current standing debates and future directions of the panoply of fields entering the Darwinian fold As such The Cambridge Handbook of Evolutionary Perspectives on Human Behavior is a valuable reference not just for evolutionary psychologists but also for scholars and students from many fields who wish to see how the evolutionary perspective is relevant to their own work *Evolutionary*
