

Rationale for EBCC

- In a complex field and rapidly changing as oncology, clinical practice guidelines (CPG) are an important tool in patient care.
- Despite around millions of published papers from clinical trials; much of it presenting conflicting results, sometimes derived from poor-quality research methodology.
- Also, CPGs don't replace individual clinical expertise, and they can't be used in the absence of the patients' specific information. Factors such as comorbidities and individual preferences need to be considered.
- The ability to find and evaluate all the relevant studies, and draw robust conclusions from the totality of the evidence, takes skill and practice, and this is called

Managing a Health Care Alliance Arnold D. Kaluzny, Richard B. Warnecke, 2000 *Epidemiologic Studies in Cancer Prevention and Screening* Anthony B. Miller, 2012-11-30 *Epidemiologic Studies in Cancer Prevention and Screening* is the first comprehensive overview of the evidence base for both cancer prevention and screening This book is directed to the many professionals in government academia public health and health care who need up to date information on the potential for reducing the impact of cancer including physicians nurses epidemiologists and research scientists The main aim of the book is to provide a realistic appraisal of the evidence for both cancer prevention and cancer screening In addition the book provides an accounting of the extent programs based on available knowledge have impacted populations It does this through

- 1 Presentation of a rigorous and realistic evaluation of the evidence for population based interventions in prevention of and screening for cancer with particular relevance to those believed to be applicable now or on the cusp of application
- 2 Evaluation of the relative contributions of prevention and screening
- 3 Discussion of how within the health systems with which the authors are familiar prevention and screening for cancer can be enhanced

Overview of the evidence base for cancer prevention and screening as demonstrated in *Epidemiologic Studies in Cancer Prevention and Screening* is critically important given current debates within the scientific community Of the five components of cancer control prevention early detection including screening treatment rehabilitation and palliative care prevention is regarded as the most important Yet the knowledge available to prevent many cancers is incomplete and even if we know the main causal factors for a cancer we often lack the understanding to put this knowledge into effect Further with the long natural history of most cancers it could take many years to make an appreciable impact upon the incidence of the cancer Because of these facts many have come to believe that screening has the most potential for reduction of the burden of cancer Yet through trying to apply the knowledge gained on screening for cancer the scientific community has recognized that screening can have major disadvantages and achieve little at substantial cost This reduces the resources that are potentially available both for prevention and for treatment
