Smith, Bruce Winterhalder, 1992-12-31 A required reading for anyone interested in the economy ecology and demography of human societies American Journal of Human Biology This excellent book can serve both as a text<sup>1</sup> 4book and as a scholarly reference American Scientist Evolutionary Ecology and Human Behavior Eric Alden Smith, Bruce Winterhalder, 1992 required reading for anyone interested in the economy ecology and demography of human societies American Journal of Human Biology This excellent book can serve both as a text book and as a scholarly reference American Scientist The Handbook of Evolutionary Psychology, Volume 1 David M. Buss, 2015-11-02 The indispensable reference tool for the groundbreaking science of evolutionary psychology Why is the mind designed the way it is How does input from the environment interact with the mind to produce behavior These are the big unanswered questions that the field of evolutionary psychology seeks to explore The Handbook of Evolutionary Psychology is the seminal work in this vibrant quickly developing new discipline In this thorough revision and expansion luminaries in the field provide an in depth exploration of the foundations of evolutionary psychology and explain the new empirical discoveries and theoretical developments that continue at a breathtaking pace Evolutionary psychologists posit that the mind has a specialized and complex structure just as the body has a specialized and complex structure From this important theoretical concept arises the vast array of possibilities that are at the core of the field which seeks to examine such traits as perception language and memory from an evolutionary perspective This examination is intended to determine the human psychological traits that are the products of sexual and natural selection and as such to chart and understand human nature Join the discussion of the big questions addressed by the burgeoning field of evolutionary psychology Explore the foundations of evolutionary psychology from theory and methods to the thoughts of EP critics Discover the psychology of human survival mating parenting cooperation and conflict culture and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines The Handbook of Evolutionary Psychology is the definitive guide for every psychologist and student interested in keeping abreast of new ideas in this quickly developing field Adaptation and Human Behavior Napoleon Chagnon, 2017-09-08 This volume presents state of the art empirical studies working in a paradigm that has become known as human behavioral ecology The emergence of this approach in anthropology was marked by publication by Aldine in 1979 of an earlier collection of studies edited by Chagnon and Irons entitled Evolutionary Biology and Human Social Behavior An Anthropological Perspective During the two decades that have passed since then this innovative approach has matured and expanded into new areas that are explored here The book opens with an introductory

chapter by Chagnon and Irons tracing the origins of human behavioral ecology and its subsequent development. Subsequent chapters written by both younger scholars and established researchers cover a wide range of societies and topics organized into six sections. The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches in the study of evolution and human behavior: evolutionary psychology and dual inheritance theory. The second section includes five studies of mating efforts in a variety of societies from South America and Africa. The third section covers parenting with five studies on societies from Africa, Asia, and North America. The fourth section breaks somewhat with the tradition in human behavioral ecology by focusing on one particularly problematic issue: the demographic transition using data from Europe, North America, and Asia. The fifth section includes studies of cooperation and helping behaviors using data from societies in Micronesia and South America. The sixth and final section consists of a single chapter that places the volume in a broader critical and comparative context. The contributions to this volume demonstrate with a high degree of theoretical and methodological sophistication the maturity and freshness of this new paradigm in the study of human behavior. The volume will be of interest to anthropologists and other professions working on the study of cross-cultural human behavior.

**Evolutionary Psychology** Neil Levy, 2017-03-02

Evolutionary approaches to the study of human beings have been able to explain the origin and maintenance of many of the features of our bodies Many thinkers believe that an evolutionary approach will be equally fruitful when it comes to explaining the features of our minds Since our behaviour is driven by our minds our cognitive dispositions and processes are likely to have been a target of selection and adaptation This volume collects recent prominent explorations of this theme as well as the voices of dissenters who argue that our minds are far more significantly the product of culture than of evolution

**Homo Biologicus** Charles Elworthy, 1993 Revised and extended version of doctoral dissertation

**Evolutionary Perspectives on Environmental Problems** Iver Myrsetrud, 2017-07-05

The twenty first century presents an increasing number of environmental problems including toxic pollution global warming destruction of tropical forests extinction of biological diversity and depletion of natural resources These environmental problems are generally due to human behavior namely over consumption of resources and overpopulation Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology This in turn requires considerations of human nature and the evolutionary design of the human mind Evolutionary research on human behavior has profound implications for the environmental sciences The aim of this collection is to bring together a variety of chapters that show how and why

Part 1 Human Nature and Resource Conservation addresses environmental problems from different evolutionary perspectives

Part 2 The Ecological Noble Savage Hypothesis examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture

Part 3 The Tragedy of the Commons explores the conservation of common pool or open access natural resources such as fisheries forests grazing lands freshwater and clean air

Part 4 The Evolution of Discounting and Conspicuous Consumption looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources

Part 5 Overpopulation and Fertility Declines addresses the evolution of human reproductive decisions

Part 6 Biophilia aims to explain why people cherish nature as well as destroy it The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary

sciences of evolutionary psychology and behavioral ecology This reader aims to help bridge Adaptation and Human Behavior Lee Cronk, Napoleon A. Chagnon, William Irons, 2000 This volume presents state of the art empirical studies working in a paradigm that has become known as human behavioral ecology The emergence of this approach in anthropology was marked by publication by Aldine in 1979 of an earlier collection of studies edited by Chagnon and Irons entitled *Evolutionary Biology and Human Social Behavior An Anthropological Perspective* During the two decades that have passed since then this innovative approach has matured and expanded into new areas that are explored here The book opens with an introductory chapter by Chagnon and Irons tracing the origins of human behavioral ecology and its subsequent development Subsequent chapters written by both younger scholars and established researchers cover a wide range of societies and topics organized into six sections The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches in the study of evolution and human behavior evolutionary psychology and dual inheritance theory The second section includes five studies of mating efforts in a variety of societies from South America and Africa The third section covers parenting with five studies on societies from Africa Asia and North America The fourth section breaks somewhat with the tradition in human behavioral ecology by focusing on one particularly problematic issue the demographic transition using data from Europe North America and Asia The fifth section includes studies of cooperation and helping behaviors using data from societies in Micronesia and South America The sixth and final section consists of a single chapter that places the volume in a broader critical and comparative context The contributions to this volume demonstrate with a high degree of theoretical and methodological sophistication the maturity and freshness of this new paradigm in the study of human behavior The volume will be of interest to anthropologists and other professions working on the study of cross cultural human behavior Lee Cronk is associate professor of anthropology at Rutgers University Napoleon Chagnon is professor of anthropology emeritus at the University of California Santa Barbara William Irons is professor of anthropology at Northwestern University Evanston Illinois **Ecology**, 1960 Publishes essays and articles that report and interpret the results of original scientific research in basic and applied ecology **Journal of the Anthropological Society of Oxford**, 1994 **JASO**, 1994 **Environmental Planning** Jeroen C. J. M. van den Bergh, Kenneth Button, Peter Nijkamp, 2007 Contributes to applied cost benefit analysis CBA and other evaluation methods in the context of the regional policy of the European Union This book states that through the use of Structural Funds and other financial and regulatory mechanisms the EU can help to promote thousands of infrastructure projects **The Evolutionary Archaeology of Ceramic Diversity in Ancient Fiji** Ethan E. Cochrane, 2009 The research presented here investigates the evolution of material cultural diversity in the Yasawa Islands in the northwestern corner of the Fijian archipelago This work builds upon several field seasons of basic research in the Yasawas as well as other large scale ceramic analyses in Fiji This study constructs answers using an explanatory framework explicitly designed to account for the evolution of cultural

diversity in prehistory This explanatory framework combines the effects of cultural transmission selection and other sorting processes and innovation Using this explanatory framework this research attempts to answer the following three questions 1 What domains of ceramic similarity in the Yasawa Islands can be used to define culturally transmitting populations or lineages 2 What are the spatial and temporal distributions of transmission lineages defined along different avenues of transmission and 3 What are the possible explanations for the distribution of these lineages Chapter 2 examines some of the previous archaeological and other research in Fiji that has attempted to explain or document cultural biological and linguistic diversity Chapter 3 more completely develops the theoretical framework used to explain prehistoric ceramic similarities and difference in terms of transmission lineages An outline of the natural and cultural history of the Yasawa Islands is presented in Chapter 4 Classifications of ceramic variation and other analyses are presented in Chapter 5 In Chapter 6 cladistic and seriation analyses generate hypotheses for the transmission history of Yasawa Islands populations Chapter 7 reviews the results of this research in the context of other archaeological work in Fiji The approach to explaining cultural similarities and differences employed in this research indicates that prehistoric cultural diversity can be examined using cultural transmission selection and innovation to produce empirically testable hypotheses regarding the historical relatedness of populations The further development of this approach by scholars will do much to answer long standing questions

Evolutionary Perspectives on Environmental Problems Iver Myrnes, 2007 The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behaviour and the interdisciplinary sciences of evolutionary psychology and behavioral ecology It aims to bridge the division between biological and social sciences and provide a synthesis between evolutionary and environmental science
