**Evolving Animals** Wallace Arthur, 2014-08-07 Covering all the main animal groups from jellyfish to mammals this book unravels the story of animal evolution      **Biological Evolution** ,      **Biological Evolution** Mike Cassidy, 2020-11-19

Biological evolution the theory of natural selection and of common descent is a triumph both of human reasoning and scientific undertaking The biological discipline of evolution contains both a chronicle of human endeavour and the story of life on Earth This book is concerned with living forms and how they developed from simple and unpromising beginnings It considers evolution as both process and product The author an experienced teacher and educator employs a historical narrative used to convey the idea of change with modification and to emphasise the relevance of evolution to contemporary bioscience Biological evolution has now become part of the scientific orthodoxy and this accessible text will assist undergraduate students in the biological sciences within any ongoing debate      *Evolving Pathways* Giuseppe

Fusco, 2008-01-10 Evolutionary developmental biology or evo devo is the study of the relationship between evolution and development Dealing specifically with the generative mechanisms of organismal form evo devo goes straight to the core of the developmental origin of variation the raw material on which natural selection and random drift can work *Evolving Pathways* brings together contributions that represent a diversity of approaches Topics range from developmental genetics to comparative morphology of animals and plants alike and also include botany and palaeontology two disciplines for which the potential to be examined from an evo devo perspective has largely been ignored until now Researchers and graduate students will find this book a valuable overview of current research as we begin to fill a major gap in our perception of evolutionary change      **Understanding Species** John S. Wilkins, 2023-04-20 Are species worth saving Can they be

resurrected by technology What is the use of species in biomedicine These questions all depend on a clear definition of the concept of species yet biologists have long struggled to define this term In this accessible book John S Wilkins provides an introduction to the concept of species in biology philosophy ethics policymaking and conservation Using clear language and easy to understand examples throughout the book provides a history of species and why we use them It encourages readers to appreciate the philosophical depth of the concept as well as its connections to logic and science For any interested reader this short text highlights the complexities of a single idea in biology the problems with the concept of species and the benefits of it in helping us to answer the bigger questions and understand our living world      *Creatures of Accident* Wallace

Arthur, 2007-09-04 The most important aspect of evolution from a philosophical viewpoint is the rise of complex advanced creatures from simple primitive ones This vertical dimension of evolution has been downplayed in large part because it was in the past associated with unsavory political views This avoidance has however left evolutionary biology open to the perception that it deals merely with the diversification of similar creatures all at the same level of advancedness from a common ancestor for example the classic case studies of finches with different beaks The latest incarnation of creationism

dubbed Intelligent Design or ID has taken advantage of this It portrays an evolutionary process that is guided especially in its upward direction by the hand of an unseen Creator to ensure that it ends up producing humans This book builds a persuasive picture of how unaided evolution produces advanced creatures from simple ones by an essentially accidental process From publisher description

**Darwinism, Design, and Public Education** John Angus Campbell, Stephen C. Meyer, 2003 Examines intelligent design as a science a philosophy and a movement for educational reform Central to all three aspects of ID is its claim that if science education is to be other than state sponsored propaganda a distinction must be drawn between empirical science and materialist philosophy
