 Electronics: A First Course In Electronics** Kevin Karplus,2023-06-06 This textbook is for a first course on electronics It
 assumes no prior electronics experience but does assume that students have had calculus 1 single variable differential
 calculus and high school physics A key idea of the course is that students need a lot of design experience and hands on work
 rather than a lot of theory The course is centered around the labs which are a mix of design labs and measurement modeling
 labs This unique volume takes students from knowing no electronics to being able to design and build amplifier and filter
 circuits for connecting sensors to microcontrollers within 20 weeks Students design a digital thermometer a blood pressure
 meter an optical pulse monitor an EKG an audio preamplifier and a class D power amplifier They also learn how to measure
 and characterize components including impedance spectroscopy of a loudspeaker and of electrochemical electrodes Related
