Flying Lightness Promises For Structural Elegance:

Lightness Adriaan Beukers, Ed van Hinte, 2005 The story of Lightness is not just about airplanes or composite materials although they play an important role It really deals with the building structure of all things made and grown It is essentially a book on technology it will you to look at structures more inensley and see them in a different light Flying Lightness Adriaan Beukers, Ed van Hinte, 2005 Flying Lightness paints a picture of a heroic century of aircraft development against the background of steadily increasing travel speeds Since the Wright brothers made their first brief flight over 100 years ago aircraft construction seems to have become stuck in a rut Today rapid advances in the field of composites are opening up new possibilities for optimizing aircraft configurations and revising structural principles Composites are combinations of two or more physically distinct materials that enhance each other s properties The new modes of system integration and improved structural quality they offer may even produce a 30 percent more efficient blended wing passenger plane Flying wings once just a footnote in the history of air transport could well become the aircraft of the 21st century Best Dutch Book Design 2005 *Structures and Architecture* Paulo J. Cruz, 2016-10-14 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process exploiting together new concepts applications and challenges This set of book of abstracts and full paper searchable CD ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho Guimar es Portugal July 2016 to promote the synergy in the collaboration between the disciplines of architecture and structural engineering **CleanEra - A Collection of Research Projects for Sustainable Aviation** The CleanEra Team, 2015-10-21 The CleanEra project was initiated with the goal of developing revolutionary ideas for civil aviation These ideas were to offer solutions which would limit and reduce some of the negative aspects of aviation namely emissions and the use of resources This book presents you with the highlights of this journey in search of new technologies for a revolutionary aircraft an aircraft that not only offers a future of comfortable air travel for the passenger but a future of sustainable aviation for the planet as well **The Architecture of Error** Francesca Hughes, 2014-11-07 Why the rise of redundant precision in architecture and the accompanying fear of error are key to understanding the discipline s needs anxieties and desires When architects draw even brick walls to six decimal places with software designed to cut lenses it is clear that the logic that once organized relations between precision and material error in construction has unraveled Precision already a promiscuous term seems now to have been uncoupled from its contract with truthfulness Meanwhile error and the always political space of its dissent has reconfigured itself In The Architecture of Error Francesca Hughes argues that behind the architect s acute fetishization of redundant precision lies a

special fear of physical error What if we were to consider the pivotal cultural and technological transformations of modernism to have been driven not so much by the causes its narratives declare she asks as by an unspoken horror of loss of control over error material life and everything that matter stands for Hughes traces the rising intolerance of material vagaries from the removal of ornament to digitalized fabrication that produced the blind rejection of organic materials the proliferation of material testing and the rhetorical obstacles that blighted cybernetics Why is it she asks that the more we cornered physical error the more we feared it Hughes s analysis of redundant precision exposes an architecture of fear whose politics must be called into question Proposing error as a new category for architectural thought Hughes draws on other disciplines and practices that have interrogated precision and failure citing the work of scientists Nancy Cartwright and Evelyn Fox Keller and visual artists Gordon Matta Clark Barbara Hepworth Rachel Whiteread and others These non architect practitioners she argues show that error need not be excluded and precision can be made accountable
