## **Foliations I Graduate Studies In Mathematics:**

Foliations I Alberto Candel, Lawrence Conlon, 2000 The first of two volumes on the qualitative theory of foliations this comprehensive work has something to offer to a broad spectrum of readers from beginners to advanced students and professional researchers Packed with a wealth of illustrations and copious examples at varying degrees of difficulty this highly accessible text provides the first full treatment in the literature of the theory of levels for foliated manifolds of codimension one It would make an elegant supplementary text for a topics course at the advanced graduate level

*Foliations II* Alberto Candel, Lawrence Conlon, 2000 This is the second of two volumes on foliations the first is Volume 23 of this series In this volume three specialized topics are treated analysis on foliated spaces characteristic classes of foliations and foliated three manifolds Each of these topics represents deep interaction between foliation theory and another highly developed area of mathematics In each case the goal is to provide students and other interested people with a substantial introduction to the topic leading to further study using the extensive available literature

**Foliations 2012 - Proceedings Of The International Conference** Jesus A Alvarez Lopez, Steven Hurder, Remi Langevin, Takashi Tsuboi, Pawel Walczak, 2013-10-25 This volume is a compilation of new results and surveys on the current state of some aspects of the foliation theory presented during the conference FOLIATIONS 2012 It contains recent materials on foliation theory which is related to differential geometry the theory of dynamical systems and differential topology Both the original research and survey articles found in here should inspire students and researchers interested in foliation theory and the related fields to plan his her further research

**Foliations, Geometry, and Topology** Nicolau Corção Saldanha, 2009 This volume represents the proceedings of the conference on Foliations Geometry and Topology held August 6 10 2007 in Rio de Janeiro Brazil in honor of the 70th birthday of Paul Schweitzer The papers concentrate on the theory of foliations and related areas such as dynamical systems group actions on low dimensional manifolds and geometry of hypersurfaces There are survey papers on classification of foliations and their dynamical properties including codimension one foliations with Bott Morse singularities Other papers involve the relationship of foliations with characteristic classes contact structures and Eliashberg Mishachev wrinkled mappings

**Foliations** Alberto Candel, Lawrence Conlon, 1900 This is the second of two volumes on foliations the first is Volume 23 of this series In this volume three specialized topics are treated analysis on foliated spaces characteristic classes of foliations and foliated three manifolds Each of these topics represents deep interaction between foliation theory and another highly developed area of mathematics In each case the goal is to provide students and other interested people with a substantial introduction to the topic leading to further study using the extensive available literature

Geometric Complex Analysis Jisoo Byun, Hong Rae Cho, Sung Yeon Kim, Kang-Hyurk Lee, Jong-Do Park, 2018-09-08 The KSCV Symposium the Korean Conference on Several Complex Variables started in 1997 in an effort to promote the study of complex analysis and geometry Since then the conference met semi regularly for about 10 years and then settled on being

held biannually The sixth and tenth conferences were held in 2002 and 2014 as satellite conferences to the Beijing International Congress of Mathematicians ICM and the Seoul ICM respectively The purpose of the KSCV Symposium is to organize the research talks of many leading scholars in the world to provide an opportunity for communication and to promote new researchers in this field

**Generic Coarse Geometry of Leaves** Jesús A. Álvarez López,Alberto Candel,2018-07-28 This book provides a detailed introduction to the coarse quasi isometry of leaves of a foliated space and describes the cases where the generic leaves have the same quasi isometric invariants Every leaf of a compact foliated space has an induced coarse quasi isometry type represented by the coarse metric defined by the length of plaque chains given by any finite foliated atlas When there are dense leaves either all dense leaves without holonomy are uniformly coarsely quasi isometric to each other or else every leaf is coarsely quasi isometric to just meagerly many other leaves Moreover if all leaves are dense the first alternative is characterized by a condition on the leaves called coarse quasi symmetry Similar results are proved for more specific coarse invariants like growth type asymptotic dimension and amenability The Higson corona of the leaves is also studied All the results are richly illustrated with examples The book is primarily aimed at researchers on foliated spaces More generally specialists in geometric analysis topological dynamics or metric geometry may also benefit from it

**Topology and Geometry of Manifolds** Gordana Matic,Clint McCrory,2003 Since 1961 the Georgia Topology Conference has been held every eight years to discuss the newest developments in topology The goals of the conference are to disseminate new and important results and to encourage interaction among topologists who are in different stages of their careers Invited speakers are encouraged to aim their talks to a broad audience and several talks are organized to introduce graduate students to topics of current interest Each conference results in high quality surveys new research and lists of unsolved problems some of which are then formally published Continuing in this 40 year tradition the AMS presents this volume of articles and problem lists from the 2001 conference Topics covered include symplectic and contact topology foliations and laminations and invariants of manifolds and knots Articles of particular interest include John Etnyre s Introductory Lectures on Contact Geometry which is a beautiful expository paper that explains the background and setting for many of the other papers This is an excellent introduction to the subject for graduate students in neighboring fields Etnyre and Lenhard Ng s Problems in Low Dimensional Contact Topology and Danny Calegari s extensive paper Problems in Foliations and Laminations of 3 Manifolds are carefully selected problems in keeping with the tradition of the conference They were compiled by Etnyre and Ng and by Calegari with the input of many who were present This book provides material of current interest to graduate students and research mathematicians interested in the geometry and topology of manifolds

Singularities and Foliations. Geometry, Topology and Applications Raimundo Nonato Araújo dos Santos,Aurélio Menegon Neto,David Mond,Marcelo J. Saia,Jawad Snoussi,2018-03-21 This proceedings book brings selected works from two conferences the 2nd Brazil Mexico Meeting on Singularity and the 3rd Northeastern Brazilian Meeting on Singularities that

were held in Salvador in July 2015. All contributions were carefully peer reviewed and revised and cover topics like Equisingularity Topology and Geometry of Singularities, Topological Classification of Singularities of Mappings and more. They were written by mathematicians from several countries including Brazil, Spain, Mexico, Japan and the USA on relevant topics on Theory of Singularity such as studies on deformations, Milnor fibration, foliations, Catastrophe theory and myriad applications. Open problems are also introduced, making this volume a must read both for graduate students and active researchers in this field.

Holomorphic Foliations with Singularities Bruno Scárdua, 2021-12-01. This concise textbook gathers together key concepts and modern results on the theory of holomorphic foliations with singularities, offering a compelling vision on how the notion of foliation usually linked to real functions and manifolds can have an important role in the holomorphic world as shown by modern results from mathematicians as H. Cartan, K. Oka, T. Nishino and M. Suzuki. The text starts with a gentle presentation of the classical notion of foliations, advancing to holomorphic foliations and then holomorphic foliations with singularities. The theory behind reduction of singularities is described in detail as well the cases for dynamics of a local diffeomorphism and foliations on complex projective spaces. A final chapter brings recent questions in the field as holomorphic flows on Stein spaces and transversely homogeneous holomorphic foliations along with a list of open questions for further study and research. Selected exercises at the end of each chapter help the reader to grasp the theory. Graduate students in Mathematics with a special interest in the theory of foliations will especially benefit from this book which can be used as supplementary reading in Singularity Theory courses and as a resource for independent study on this vibrant field of research.
