Glass In Structures Elements Concepts Designs:

Glass in Structures Rob Nijse, 2003-09-01 The author Rob Nijse describes with great expertise designs concepts and realized projects in which glass elements fulfil crucial architectural tasks In the advanced architecture of today the use of this transparent material goes well beyond self supporting functions and comprises structural parts such as columns walls floors and roofs One of the characteristic material properties of glass to break suddenly and completely under certain conditions seems only at first glance incompatible with the static responsibilities of structural elements each of the construction achievements presented demonstrates how the engineer is challenged every time again to refute that assumption The various creative solutions arrived at in close cooperation with some of the most interesting architects of the present are carefully documented by a multitude of construction drawings sketches and photographs BOOK JACKET
