Glacier A Natural History Guide Falcon Guide:

Glacier: A Natural History Guide David Rockwell, 2023-12-12 Author and naturalist David Rockwell explains the evolution of the park's geology from the erosion of Australian mountains more than a billion years ago to the glaciers that gave Glacier National Park its distinctive landscape. He explores the natural history of the plants and animals of the park's six distinct regions. You'll learn about the park's greatest predators: grizzly bears, mountain lions, and wolves, and about their complex relationship with their prey. The result is a fascinating and intimate portrait of one of the world's last truly wild places.

Christopher White, 2024-08-06 Global warming usually seems to happen far away, but one catastrophic effect of climate change is underway right now in the Rocky Mountains. In *The Melting World*, Chris White travels to Montana to chronicle the work of Dan Fagre, a climate scientist and ecologist whose work shows that alpine glaciers are vanishing rapidly close to home. For years, Fagre has monitored the ice sheets in Glacier National Park, proving that they—and by extension, all Rocky Mountain ice—will melt far faster than previously imagined. How long will the ice fields survive? What are the consequences on our environment? *The Melting World* chronicles the first extinction of a mountain ecosystem in what is expected to be a series
