Note the Refresh Required icon (🔄) within the **Mesh** cell for the system. This indicates that the state of the cell requires a refresh and that upstream data has changed since the last refresh or update (such as an update to the geometry). Once the mesh is defined, the state of the **Mesh** cell will change accordingly, as will the state of the next cell in the system, in this case the **Setup** cell.

1. Open the ANSYS Meshing application.

In the ANSYS Workbench **Project Schematic**, double-click the **Mesh** cell in the elbow fluid flow analysis system (cell A.3). This displays the ANSYS Meshing application with the elbow geometry already loaded. You can also right-click the **Mesh** cell to display the context menu where you can select the **Edit...** option.

 Jairus R. D. David, Pablo M. Coronel, Josip Simunovic, 2022-09-09 Nine years have passed since the second edition of the
 Handbook of Aseptic Processing and Packaging was published Significant changes have taken place in several aseptic
 processing and packaging areas These include aseptic filling of plant based beverages for non refrigerated shelf stable
 formats for longer shelf life and sustainable packaging along with cost of environmental benefits to leverage savings on
 energy and carbon footprint In addition insight into safe processing of particulates using two and three dimensional thermal
 processing followed by prompt cooling is provided In the third edition the editors have compiled contemporary topics with
 information synthesized from internationally recognized authorities in their fields In addition to updated information 12 new
 chapters have been added in this latest release with content on Design of the aseptic processing system and thermal
