The Ray Tracer Challenge Jamis Buck, 2019-02-26

Brace yourself for a fun challenge: build a photorealistic 3D renderer from scratch. It's easier than you think. In just a couple of weeks, build a ray tracer that renders beautiful scenes with shadows, reflections, brilliant refraction effects and subjects composed of various graphics primitives: spheres, cubes, cylinders, triangles and more. With each chapter, implement another piece of the puzzle and move the renderer that much further forward. Do all of this in whichever language and environment you prefer and do it entirely test first so you know it's correct. Recharge yourself with this project's immense potential for personal exploration, experimentation and discovery. The renderer is a ray tracer, which means it simulates the physics of light by tracing the path of light rays around your scene. Each exciting chapter presents a bite-sized piece of the puzzle, building on earlier chapters and setting the stage for later ones. Requirements are given in plain English, which you translate into tests and code. When the project is complete, look back and realize you've built an entire system. Test first. There's no research necessary; all the necessary formulas and algorithms are presented and illustrated right here. Dive into intriguing topics from fundamental concepts such as vectors and matrices to the algorithms that simulate the intersection of light rays with spheres, planes, cubes, cylinders and triangles to geometric patterns such as checkers and rings. Lighting and shading effects such as shadows and reflections make your scenes come to life and constructive solid geometry (CSG) enables you to combine your graphics primitives in simple ways to produce complex shapes. Play and experiment as you discover the fun of writing a ray tracer. Accept the challenge today.
