Directions

Solve the following problems. Show work, state all units clearly, and label the units of each and underline your solution.

All problems assume that conditions are ideal. Power, flow, and force are not conserved.

Problems

A hydraulic system is producing 1000 in.³ of cylinder pressure. A cylinder is needed to move an unknown load over a distance of 100 in. Determine the oil flow in gpm to complete this job.

1. Identify and label all known and unknown values.

2. What is the required area of the pressure cylinder?

Formula	Substitute & Solve	Final Answer
$A = \frac{V}{L}$	$A = \frac{1000 \text{ in}^3}{100 \text{ in}} = 10 \text{ in}^2$	$A = 10 \text{ in}^2$

3. What is the required diameter of the pressure cylinder?

Formula	Substitute & Solve	Final Answer
$A = \pi r^2$ $d = 2r$	$10 \text{ in}^2 = \pi r^2$ $r = \sqrt{\frac{10 \text{ in}^2}{\pi}} = 1.78 \text{ in}$ $d = 2(1.78 \text{ in}) = 3.56 \text{ in}$	$d = 3.56 \text{ in}$

Fluid Power Circuits and Controls John S. Cundiff, Michael F. Kocher, 2019-12-05 *Fluid Power Circuits and Controls* Fundamentals and Applications Second Edition is designed for a first course in fluid power for undergraduate engineering students. After an introduction to the design and function of components, students apply what they've learned and consider how the component operating characteristics interact with the rest of the circuit. The Second Edition offers many new worked examples and additional exercises and problems in each chapter. Half of these new problems involve the basic analysis of specific elements and the rest are design oriented, emphasizing the analysis of system performance. The envisioned course does not require a controls course as a prerequisite; however, it does lay a foundation for understanding the extraordinary productivity and accuracy that can be achieved when control engineers and fluid power engineers work as a team on a fluid power design problem. A complete solutions manual is available for qualified adopting instructors. *Fluid Power Systems* Patrick J. Klette, 2010-06-30 The Answer Key contains answers to questions in the text workbook. Answers and solutions are given for all problems. **Fluid Power Standards** National Fluid Power Association, American National Standards Institute, International Organization for Standardization, 1978 **Fundamentals of Fluid Power** William D. Wolansky, John Naghosian, Russell W. Henke, 1977 **Fluid Power Technology** Robert P. Kokernak, 1999 Ideal for use in industrial training seminars, this well-illustrated and exceptionally lucid guide to fluid power technology strikes just the right balance between theory and application, providing both conceptual and practical information needed by today's technicians and technologists to succeed in the field. Emphasizes the inherent simplicity of fluid power systems and their underlying principles of operation and develops each topic logically with careful attention to fine details. First shows how and why fluid behaves in a particular manner; next makes abstract concepts concrete by demonstrating how this behavior is evidenced in situations already familiar to readers; then extends concepts to new conditions and applications. Offers an adaptable approach to mathematics, making readers at ease no matter what their skill level. Offers many useful learning tools, including safety sidebars, suggested activities, over 60% new to this edition, exercises and problems, 30% new, and end-of-chapter questions. Many new. Now adds a section on Using Computers to its introductory chapter. *Glossary of Terms for Fluid Power* National Fluid Power Association, 1970 **Practice Problems with Solutions** Clayton T. Crowe, Donald F. Elger, John A. Roberson, Barbara C. Williams, 2009-01-20 This Practice Problems with Solutions was written to accompany *Engineering Fluid Mechanics* by Clayton Crowe. It helps to build a stronger foundation for students through practice, since connecting the math and theory of fluid mechanics to practical applications can be a difficult process. Simple and effective examples show how key equations are utilized in practice, and step-by-step descriptions provide details into the processes that engineers follow. *Fluid Power Solved Problems* Eugenio Valencia Leonardo, Ricard Bosch i Tous, 19?? *Fluid Power for Technicians* Donald G.
