Getting to the Common Core Sharon L. Spencer, Sandra Vavra, 2015-01-01 The Common Core Standards have recently been adopted in most states across the nation and teachers are in the process of getting to the core of these standards Teaching to standards is not a new concept teachers have adapted to new standards every few years for quite some time And teachers are adaptable as can be seen in this book We are writing this book to demonstrate how teachers use research based strategies to meet Common Core Standards while still focusing on students Our goal is to help teachers visualize students in action as other teachers describe the implementation of research based strategies in their own classrooms show student work samples and provide reflections of student success in achieving the standards Many Common Core Standards books focus on the standards but our approach focuses on strategies that engage the students in the classroom showing how different teachers at varying grade levels have used the strategies to meet the standards With this focus we believe that teachers gain a new and positive perspective on approaching the new standards and see the flexibility of strategies for meeting standards across subject areas We have examined research on the strategies with the purpose of giving teachers a brief description of why these strategies work before giving actual examples from classrooms We also work closely with teachers in the public schools and have our finger on the pulse of what is happening in the public schools one of the current stressors being unpacking the Common Core Standards This book actually focuses on practice We begin by laying out a rationale in our first chapter The Core Values of Education Then each chapter focuses on a strategy including 1 a brief description about the research supporting each strategy and 2 several examples from different grade levels which include a description of how the strategy was used student work samples and a reflection on the use of the strategy The research descriptions are fairly short because while we believe professional educators aka teachers in this case should know the research that supports practice we know they are not typically interested in long diatribes about the research **Thinking**

Tools for Young Readers and Writers Carol Booth Olson, Angie Balias, Emily McCourtney, Mary Widtmann, 2018 In her new book bestselling author and professional developer Carol Booth Olson and colleagues show teachers how to help young readers and writers construct meaning from and with texts This practical resource offers a rich array of research based teaching strategies activities and extended lessons focused on the thinking tools employed by experienced readers and writers It shows teachers how to draw on the natural connections between reading and writing and how cognitive strategies can be embedded into the teaching of narrative informational and argumentative texts Including artifacts and written work produced by students across the grade levels the authors connect the cognitive and affective domains for full student engagement This book seamlessly bridges the gap from research to everyday practice You get an extremely well organized set of overarching instructional principles that are right for our era and brought to life through well explained instructional guides and classroom activities From the Foreword by Judith Langer University at Albany SUNY I have always admired Carol

Booth Olson's work with secondary students and teachers. She now applies those essential principles and practices to elementary and middle school students. Bravo P.
