Decision Making under Uncertainty Kerstin Preuschoff, Peter N. C. Mohr, Ming Hsu, 2015-06-16 Most decisions in life are based on incomplete information and have uncertain consequences To successfully cope with real life situations the nervous system has to estimate represent and eventually resolve uncertainty at various levels A common tradeoff in such decisions involves those between the magnitude of the expected rewards and the uncertainty of obtaining the rewards For instance a decision maker may choose to forgo the high expected rewards of investing in the stock market and settle instead for the lower expected reward and much less uncertainty of a savings account Little is known about how different forms of uncertainty such as risk or ambiguity are processed and learned about and how they are integrated with expected rewards and individual preferences throughout the decision making process With this Research Topic we aim to provide a deeper and more detailed understanding of the processes behind decision making under uncertainty *Estimands, Estimators and Sensitivity Analysis in Clinical Trials* Craig Mallinckrodt, Geert Molenberghs, Ilya Lipkovich, Bohdana Ratitch, 2019-12-23 The concepts of estimands analyses estimators and sensitivity are interrelated Therefore great need exists for an integrated approach to these topics This book acts as a practical guide to developing and implementing statistical analysis plans by explaining fundamental concepts using accessible language providing technical details real world examples and SAS and R code to implement analyses The updated ICH guideline raises new analytic and cross functional challenges for statisticians Gaps between different communities have come to surface such as between causal inference and clinical trialists as well as among clinicians statisticians and regulators when it comes to communicating decision making objectives assumptions and interpretations of evidence This book lays out a path toward bridging some of these gaps It offers A common language and unifying framework along with the technical details and practical guidance to help statisticians meet the challenges A thorough treatment of intercurrent events ICEs i e postrandomization events that confound interpretation of outcomes and five strategies for ICEs in ICH E9 R1 Details on how estimands integrated into a principled study development process lay a foundation for coherent specification of trial design conduct and analysis needed to overcome the issues caused by ICEs A perspective on the role of the intention to treat principle Examples and case studies from various areas Example code in SAS and R A connection with causal inference Implications and methods for analysis of longitudinal trials with missing data Together the authors have offered the readers their ample expertise in clinical trial design and analysis from an industrial and academic perspective **Visual Dysfunction in Schizophrenia: A View into the Mechanisms of Madness?** Randolph Blake, Steven Silverstein, Brian P. Keane, Michael Green, Szabolcs Kéri, 2015-05-11 Research on visual perception in schizophrenia has a long history However it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development e g the NIMH CNTRICS and RDoC initiatives Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific

computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well studied replicable low level examples. Importantly far from being a passive sensory registration process visual perception is active inferential and hypothesis generating and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia. Despite progress made in understanding visual processing disturbances in schizophrenia many challenges exist and many unexplored areas are in need of examination. For example the directional relationships between perceptual and cognitive disturbances e.g. in attention memory executive function predictive coding remain unclear in many cases as do links with symptoms including visual hallucinations. The effect of specific visual disturbances on multisensory integration in schizophrenia has also not been explored. In addition few studies of vision in schizophrenia have used naturalistic stimuli including real world objects and almost no studies have examined processing during interaction with objects or visual exploration which can provide important data on functioning of the perception for action pathway. Relatedly studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristics of many real world situations and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition. An additional important area involves treatment of visual disturbances in schizophrenia. Two major questions regarding this are 1 can visual processing be improved in cases where it is impaired and by what types of interventions affecting which cognitive and neurobiological mechanisms and 2 what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia. Other important and understudied questions concern 1 the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse treatment response and or recovery 2 the potential role of visual functioning in diagnosing and predicting illness 3 the extent to which some visual perception disturbances are diagnostically specific to schizophrenia and 4 the extent to which visual disturbances are truly manifestations of disease as opposed to aspects of normal variation that in combination with disease serves to modify the clinical presentation. This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research. We include papers that span the entire range of different Frontiers paper types including those that are data driven using psychophysics electroencephalography neuroimaging computational and animal models and other methods reviews hypotheses theories opinion methods areas of impact and historical perspectives.

Concise Encyclopedia of Biostatistics for Medical Professionals Abhaya Indrayan, Martin P. Holt, 2016-11-25. Concise Encyclopedia of Biostatistics for Medical Professionals focuses on conceptual knowledge and practical advice rather than mathematical details enhancing its usefulness as a reference for medical professionals. The book defines and describes nearly 1000 commonly and not so commonly used biostatistical terms and methods arranged in alphabetical order. These range from simple terms such as mean and median to advanced terms such as

multilevel models and generalized estimating equations Synonyms or alternative phrases for each topic covered are listed with a reference to the topic **Connectomic Medicine** Michael E. Sughrue,Jacky T. Yeung,Nicholas B.

Fundamentals of Statistical Signal Processing, Volume III Steven M. Kay, 2013-04-05 The Complete Modern Guide to Developing Well Performing Signal Processing Algorithms In Fundamentals of Statistical Signal Processing Volume III Practical Algorithm Development author Steven M Kay shows how to convert theories of statistical signal processing estimation and detection into software algorithms that can be implemented on digital computers This final volume of Kay's three volume guide builds on the comprehensive theoretical coverage in the first two volumes Here Kay helps readers develop strong intuition and expertise in designing well performing algorithms that solve real world problems Kay begins by reviewing methodologies for developing signal processing algorithms including mathematical modeling computer simulation and performance evaluation He links concepts to practice by presenting useful analytical results and implementations for design evaluation and testing Next he highlights specific algorithms that have stood the test of time offers realistic examples from several key application areas and introduces useful extensions Finally he guides readers through translating mathematical algorithms into MATLAB code and verifying solutions Topics covered include Step by step approach to the design of algorithms Comparing and choosing signal and noise models Performance evaluation metrics tradeoffs testing and documentation Optimal approaches using the big theorems Algorithms for estimation detection and spectral estimation Complete case studies Radar Doppler center frequency estimation magnetic signal detection and heart rate monitoring Exercises are presented throughout with full solutions This new volume is invaluable to engineers scientists and advanced students in every discipline that relies on signal processing researchers will especially appreciate its timely overview of the state of the practical art Volume III complements Dr Kay's Fundamentals of Statistical Signal Processing Volume I Estimation
