Evidence of Evolution

Darwin

1. The English naturalist **Charles Darwin** noticed that there were many similarities between different species.
2. He believed that these similarities pointed to a **common ancestor** and that new species form by gradual changes over the generations.
3. Charles Darwin and **Alfred Wallace** proposed **natural selection** as the mechanism by which the most successful changes are passed on, allowing organisms to evolve to suit their environment.

Darwin's Evidence for Evolution:

1. Comparing living species (Darwin's Finches)
2. Fossil evidence
3. Comparative anatomy (different animals with similar features)
4. Artificial selection (Bulldog dog breeding)
