Detection of Fetal Abnormalities Based on Three Dimensional Nuchal Translucency Khin Wee Lai,Eko Supriyanto,2012-10-29 Ultrasound US prenatal screening has been proposed as the most effective technique for Trisomy 21 early assessment Assessment of Nuchal Translucency NT offers promising non invasive method for fetal abnormalities detection up to 75% Nevertheless current clinician practice of NT examination by locating the sonogram calipers on 2D US image requires highly trained and competent operators by adhering to a standard tedious protocol therefore it is prone to errors and hence it decreases the reliability in intra and inter observer repeatability This Brief provides the basic knowledge regarding Trisomy 21 diseases and its existing detection methods The restrictions and disadvantages of each method are discussed accordingly Therefore a non invasive early detection method using 3D ultrasound reconstruction of Nuchal Translucency is introduced This new method for 3D NT assessments has an edge over the previous 2D methods and entails the composite function in visualizing the explicit internal marker structure Further image processing techniques covered from data acquisition pre processing speckle noise reduction and 3D segmentation are also discussed This should be especially useful for students and professional researchers in the Biomedical and image processing fields
